

Papillon 50 delivered to Nice

Ariane Medical Systems has delivered a Papillon 50 Contact Therapy Treatment System to Centre Antoine, Lacassagne, Nice, France.

The machine is being tested for compliance with local regulations by Physicist, Dr Serge Marcié. It will then be transported to Centre Hospitalier Lyon Sud where it is expected to be used for treatment of rectal and skin cancers starting in February 2008.

The mobile system was fully functional within two hours of arriving in Nice and when moved to Lyon it will be immediately ready for patient treatments.

Professor Jean – Pierre Gerard practices the technique for patient treatment while Dr Serge Marcié enters the treatment prescription using the touch screen monitor of the Papillon 50
